Product Features

100 Hz refresh rates for ultra-smooth images

This Philips display refreshes the screen image up to 100 times per second which makes this monitor much faster than a standard display. With a 100 Hz frame rate, gamers are able to find those critical images on the screen that show enemy movement in an ultra-smooth motion so that they are easily targetable.

1 ms (MPRT) fast response for crisp images and smooth gameplay

MPRT (motion picture response time) is a more intuitive way to describe response time, which directly refers to the duration between seeing blurry noise and clean, crisp images. The Philips gaming monitor with 1 ms MPRT effectively eliminates smearing and motion blur and delivers sharper and more precise visuals to enhance your gaming experience.

Connect your notebook with one USB-C cable

This Philips display features a USB Type-C connector with power delivery. With intelligent and flexible power management, you can power charge your compatible device directly. Its slim, reversible USB Type-C allows for easy, one-cable connection. You can watch high-resolution video and transfer data at super speed, while powering up and recharging your compatible device at the same time.

IPS LED wide view technology for image and color accuracy

IPS displays use an advanced technology that gives you extra-wide viewing angles of 178/178 degrees, making it possible to view the display from almost any angle. Unlike standard TN panels, IPS displays give you remarkably crisp images with vivid colors, making them ideal not only for photos, movies and web browsing, but also for professional applications that demand color accuracy and consistent brightness at all times.

16:9 Full HD display for crisp, detailed images

Picture quality matters. Regular displays deliver quality, but you expect more. This display features enhanced Full HD 1920 x 1080 resolution. With Full HD for crisp detail paired with high brightness, incredible contrast and realistic colors, expect a true-to-life picture.

LowBlue Mode and Flicker-free easy-on-the eyes viewing

LowBlue Mode and Flicker-free technology have been developed to reduce eye strain and fatigue often caused by long hours in front of a monitor.

Height-adjustable for better ergonomic comfort

The height-adjustable Ergo Base is a "people-friendly" Philips monitor base that not only tilts, but is also height-adjustable, so that each user can adjust the monitor to their personal preference for maximum viewing comfort and efficiency.

Cable management reduces cable clutter for a neat workspace

Cable management is an intimate design that maintains a tidy workspace by organizing the cables and wires required for the operation of a display device.

EasySelect menu toggle key for quick on-screen menu access

The discreetly placed EasySelect menu toggle key allows you to make quick and easy adjustments to monitor settings in the on-screen display menu.

Built-in stereo speakers for multimedia

A pair of high-quality stereo speakers built into a display device.

HDMI ensures universal digital connectivity

An HDMI-ready device has all the required hardware to accept High-Definition Multimedia Interface (HDMI) input. An HDMI cable enables high-quality digital video and audio to be transmitted over a single cable from a PC or any number of AV sources (including set-top boxes, DVD players, A/V receivers and video cameras).
